

SSEESS secretariat

What we do

Our mission is to increase Sweden's involvement in international research programmes, thereby improving Swedish and international **Global Environmental Change (GEC)** research.

We want to achieve this by

- **increasing the participation** of Swedish researchers in international GEC programmes
- **increasing the flow of information** on GEC research programmes to national decision-makers and researchers
- **improving the coordination** among research funders in order to improve the use of GEC research.

Who we are

Dan Wilhelmsson (Deputy Director/Senior Research Officer) Kim von Hackwitz (Research and Communications Officer), Britta Boström (Consultant, Administrative Officer) and Magnus Tannerfeldt (Director),

SSEESS is a Swedish link to Global Environmental Change Research

Our offers to researchers

Up-to-date information

We regularly inform about international **Global Environmental Change (GEC)** organisations and research programmes on our website, in social media, and via our print materials. You are always welcome to contact us for more information and personal advice.

Grant opportunities

We offer grant opportunities to researchers in Sweden within humanities, social and natural sciences, and within all fields of GEC research.

SSEESS Swedish GEC Science Gateway

As a member of this forum, researchers in Sweden get relevant information for working with international GEC research programmes. Members even have the exclusive right to apply for a particular kind of travel support from SSEESS.

Workshops

We offer workshops where researchers have the opportunity to meet and discuss their research with other scientists as well as representatives from politics and/or business. The themes can be disciplinary, interdisciplinary or transdisciplinary, within humanities and the social and/or natural sciences.

Swedish link to Global Environmental Change research

A rapidly changing global environment requires new ways of thinking, new alliances, and interdisciplinary initiatives at an international level. Sweden is very keen to contribute inspiring ideas and research results to the international effort to tackle these challenges. Despite cutting-edge research in many relevant fields, Sweden's involvement could still be significantly increased.

SSEESS is an important Swedish link to **Global Environmental Change (GEC)** research, aiming to increase the involvement of Swedish researchers within international GEC research programmes and organisations.

Our connections to research programmes

Future Earth

Future Earth is a global research platform providing the knowledge and support to accelerate our transformations to a sustainable world.

ICSU

The International Council for Science (ICSU) aims to strengthen international science for the benefit of society, including research programmes that address Global Environmental Change issues.

ISSC

The International Social Science Council (ISSC) works to strengthen the social sciences to solve global problems, including solutions-oriented social science research on climate and global environmental change.

SDSN

The Sustainable Development Solutions Network (SDSN) mobilises various scientific and technical expertise from academia, civil society, and the private sector in support of sustainable development problem solving at local, national, and global scales.

CORE projects

CORE projects are large international GEC research projects that address questions of global importance and give relevant contributions to the science plans of the international organisation they belong to, for example to Future Earth, ICSU, ISSC or SDSN.

You will find more information at www.sseess.org

Our partnership

SSEESS acts as a Swedish link to GEC research on behalf of the members of the SSEESS partnership

between the Royal Swedish Academy of Sciences and the Swedish research funders Formas, Forte, Sida and Vetenskapsrådet. Among others, this involves representing the Swedish funders in the SSEESS partnership at different international meetings.
